

Shavlik NetChk Protect: Patch Management and Application Control for your most critical business assets.

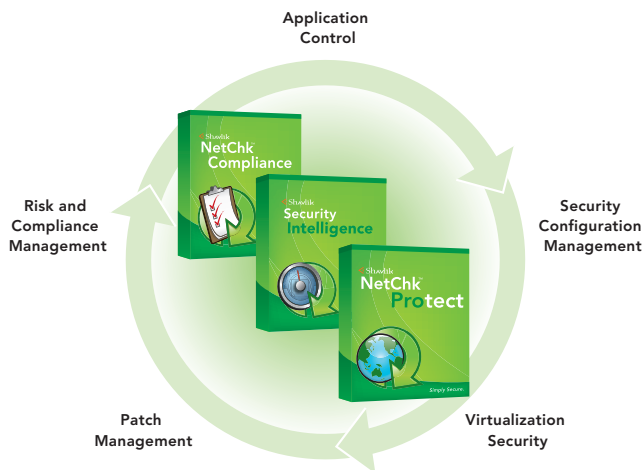

Shavlik NetChk Protect simplifies and accelerates the detection and remediation of gaps in your system security, resulting in an enterprise that is ready to improve the speed, accuracy and productivity of its IT operations - in physical and virtual environments.

Better Defense, Better Value:

“Our SLAs require 95% of business critical assets to be patched within 5 days of release of security patches. Before, we had several business units at or below 85% - but with Shavlik, we can consistently deliver at 95% or better” Director, Risk Management, Global Banking Firm.

Shavlik Security Suite

Shavlik NetChk Protect is an essential component of the Shavlik Security Suite.

Simplify and Accelerate Security and Compliance Readiness

When you implement NetChk Protect, in hours, not days or weeks, your IT organization will BE READY...

To continuously improve your security scorecard

- ▶ The Shavlik solution drives continuous improvement of your security scorecard by providing visibility of your latest real-time security status
- ▶ The Shavlik solution automatically finds and fixes gaps in key security metrics including unpatched machines, and unwanted, potentially harmful software
- ▶ Secure and patch all approved software to policies and regulations

To identify and eliminate gaps in your security

- ▶ Easily access those hard-to-manage systems, close their security gaps, and return them to a secure state
- ▶ Shavlik is often used by customers to find what their other tools miss
- ▶ Point and shoot remediation provides control over when fixes are applied

To simplify and automate security of your virtual environments

- ▶ Centralized management of patch process for all systems – physical, online virtual machines, and offline virtual machines
- ▶ First solution to assess and remediate patch levels of physical servers, online virtual machines and offline virtual machines
- ▶ Single, easy-to-use console

Shavlik NetChk® Protect

Easy to deploy; scan and remediate in minutes, not hours:

- ▶ Automatically and continuously assess, remediate and manage
- ▶ Streamlined user interface presents familiar network view
- ▶ Operationalize security to free critical IT staff

Reduce exposure to risk:

- ▶ Any patch, anywhere technology
- ▶ Trusted, proven scanning technology used to audit other patch solutions to identify and close security gaps
- ▶ Identify, report and remove out-of-policy applications to keep computers compliant with established corporate security standards
- ▶ First to market with patch data

Secure Offline Virtual Images:

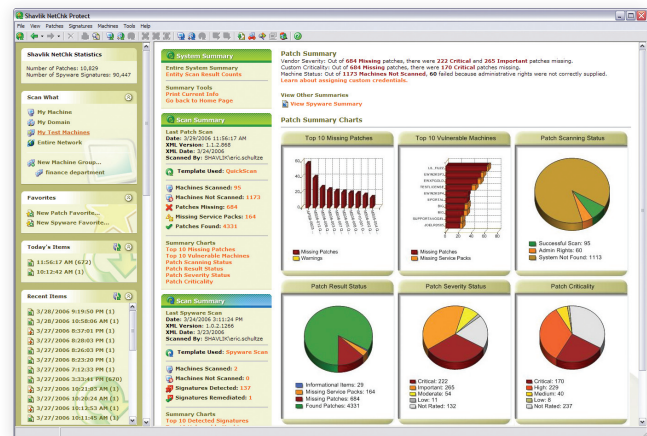

- ▶ Extend Shavlik's Any Patch, Any Where assessment technology to offline virtual images
- ▶ Fully automate continuous patch assessment and deployment to lower costs and reduce demands on IT staff
- ▶ Drive a higher state of security through continuous identification and remediation of system security gaps

Manage all network devices more effectively:

- ▶ Most flexible, precise reboot options in the industry
- ▶ Highly flexible architecture blends agentless and agent-based solutions to address distributed enterprise needs

"With Shavlik we have been able to simplify and streamline our processes, while providing management with more accurate and complete reports on our security state."

**IT Operations,
Global Banking Technology Provider**

Aggregate Reporting Capabilities:

- ▶ Allows you to see everything on your network in one report
- ▶ Flexible reporting features range from high-level summary reports down to in-depth detail on a specific machine or group of machines
