

Simplifying IT Risk and Compliance Management.

IT professionals need up-to-the-minute, comprehensive visibility into the security state of their entire network in order to properly assess potential risk to the organization and to demonstrate compliance with stated security policies, industry regulations, and IT best practices.

Shavlik Security Intelligence (SSI) is an intuitive IT risk and compliance intelligence solution that provides IT executives with a powerful solution for quickly assessing risk levels and policy non-compliance across the network. IT decision makers at any level can create their own views into areas of risk or non-compliance related to security configuration settings, system patch levels, spyware, malware, and unapproved software – via a single web based dashboard. Visibility can be easily distributed across the enterprise based on roles and responsibilities.

Shavlik Security Intelligence (SSI) is a powerful solution for monitoring security activity through an easy-to-customize web based dashboard.

Why Choose Shavlik Security Intelligence?

With SSI, organizations can quickly view and assess

1. "How Secure am I?"
2. "Are we at risk?"
3. "Are we ready for the audit?"

SSI provides real-time indicators on areas of concern or risk related to security configuration settings, system patch levels, spyware/malware levels, and unapproved software. Shavlik Security Intelligence is designed to work with extremely large amounts of security data - turning it into knowledge that helps IT managers direct their security spending to those areas that need it most.

Any type of user can create customized dashboards for an instantaneous assessment of their security and policy compliance states, but it also allows users to drill down and see the data that drives the dashboard analysis. Shavlik's SSI lets different company decision makers review and analyze risk levels of policy compliance via a single Web based application.

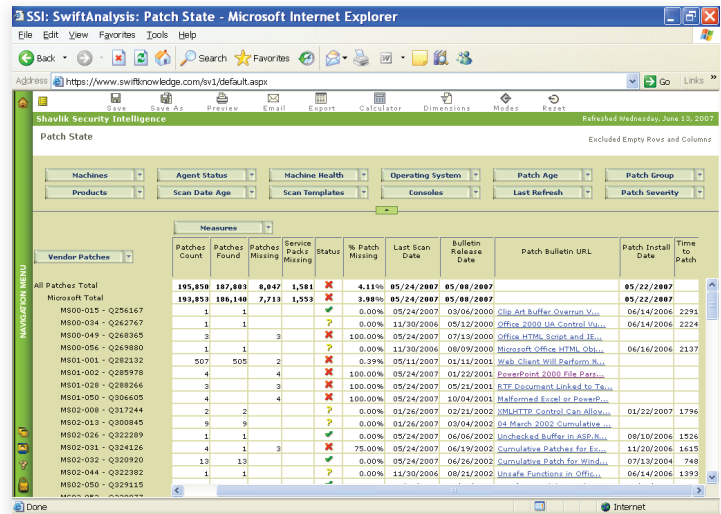

Powerful Features

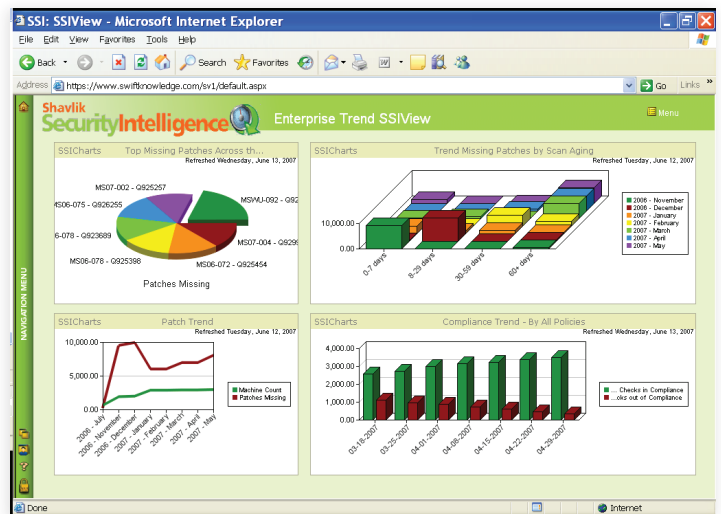

- ▶ Quickly view and assess: "How Secure Am I?"
- ▶ Intuitive and easy to navigate
- ▶ View and compare multiple policies from a single view
- ▶ Turn large amounts of security data into actionable information
- ▶ Easily create new reports, charts or graphs – no DBA support required!
- ▶ Create customized reports or activities for specific groups or decision makers
- ▶ Role-based administration – down to data attribute level
- ▶ Create email or dashboard alerts regarding non-compliance or potential risks
- ▶ Establish and monitor trend reporting to understand security posture over time - and to justify security investments
- ▶ Drill down to view data that drives the dashboard analysis
- ▶ Multiple scheduling options for data refresh; schedule can be varied based on data source
- ▶ Overlays Shavlik's industry-leading solutions for automated assessment, remediation and management, allowing quick remediation on reported security risks or policy deviations

System Requirements

- ▶ Windows 2003 Server SP1 or Later
- ▶ IIS 6.0
- ▶ SQL Server 2000 SP3 or higher
- ▶ SQL Server 2000: Analysis Services SP3
- ▶ Dot Net Framework 1.1 and 2.0
- ▶ MSXML 4.0
- ▶ MDAC 2.8
- ▶ Minimum 1GB Ram (Recommend 4GB)
- ▶ Add SSI_User to the following groups: Administrators, Users, OLAP Administrators, and .IIS_WPG

Data Drilldown From Dashboard - Allows users to drill down into the real data driving the real-time dashboard reports.

Simply Create New Charts/Graphs & Customized Views - Any authorized user can easily create customized dashboard views (without an administrator) for an instantaneous assessment of your security and policy compliance states. It also allows users to drill down and see the data that drives the dashboard analysis.
